this book s concept concerns the positive correlation between literacy and women s development and empowerment in developing countries

this book provides a simplified and practical approach to designing with plastics that funda mentally relates to the load temperature time and environment subjected to a product it will provide the basic behaviors in what to consider when designing plastic products to meet performance and cost requirements important aspects are presented such as understanding the advantages of different shapes and how they influence designs information is concise comprehensive and practical review includes designing with plastics based on material and process behaviors as de signing with any materials plastic steel aluminum wood etc it is important to know their behaviors in order to maximize product performance to cost efficiency examples of many different designed products are reviewed they range from toys to medical devices to cars to boats to underwater devices to containers to springs to pipes to buildings to aircraft to space craft the reader s product to be designed can directly or indirectly be related to product design reviews in the book important are behaviors associated and interrelated with plastic materials thermoplastics thermosets elastomers reinforced plastics etc and fabricating processes extrusion injec tion molding blow molding forming foaming rotational molding etc they are presented so that the technical or non technical reader can readily understand the interrelationships

treating anchorages as a direct application of the laws of statics and the theories governing the transfer of load this book focuses on designs that are safe and reasonably priced it is divided into two parts following a general introduction in the first chapter part one goes on to explore anchor systems components

installation and construction details presents special anchor systems such as extractable compression type multibell and regrowable anchors analyzes the transfer of load and its relation to failure modes and anchor load capacity deals with design considerations covers mechanisms and types of corrosion and details anchor stressing testing programs and evaluation standards part two considers uses and applications and design aspects of anchored structures presents design examples of practical value and reasonable simplicity and incorporates examples and case histories

answering the question of effectiveness of educational interventions is no easy task for a multitude of reasons the effectiveness of an intervention depends not only on the intervention itself but also for example on the target group the available infrastructure the current legislation the time of implementation or the expertise of the teachers this special issue shows the diversity in the goals pursued and the interventions used to achieve them it also shows methodological differences in effectiveness research and argues the need for nuanced interpretation and for explicitly considering the context for the intervention
